EDUCATION

Kennesaw State University

Bachelor of Science in Computer Science

Marietta, GA

Expected May 2027

EXPERIENCE

Kennesaw State University | Undergraduate Researcher | Marietta, GA

August 2026 - Present

- Developing Python-based causal inference workflows to study relationships between cardiovascular disease and Alzheimer's-related neuroimaging outcomes
- Building causal DAGs and applying DoWhy/EconML adjustment methods to analyze MRI and PET biomarkers, with findings presented through weekly technical reviews

ADP | Application Developer Intern | Alpharetta, GA

May 2026 - August 2026

- Refactored a Java-based document service to route GET and POST requests through source-of-record processing chains, improving request handling and failure behavior across backend workflows
- Developed reusable OAuth2 client-credentials infrastructure with token caching, automatic refresh, bearer-token injection, correlation IDs, and dynamic request payload generation for chained REST API workflows
- Built backend API tooling for 50 Document Cloud endpoints using Java, Spring Boot, and REST, expanding service coverage from 63% to 93% and eliminating 25 hours of manual validation per week

NICE Systems Inc. | Associate Software Engineer | Atlanta, GA

December 2025 - May 2026

- Architected and deployed 4+ backend AI microservices on Azure App Services, enabling real-time transcription and automated quality analysis for public safety and 911 workflows
- Built secure cloud data pipelines on Azure Data Lake and Blob Storage, processing thousands of CJIS-regulated records daily across structured and unstructured data sources
- Developed near real-time public safety dashboards for incident tracking, reporting, and QA analytics across multiple PSAP environments

NICE Systems Inc. | AI Solutions Engineer Intern | Atlanta, GA

September 2025 - December 2025

- Built a full-stack AI platform for real-time 911 call transcription, sentiment analysis, scoring, and AI-assisted coaching using FastAPI, MongoDB, Elevate AI, and OpenAI GPT
- Designed and implemented REST APIs with JWT authentication, bcrypt hashing, and role-based access for secure multi-user platform workflows

PROJECTS & LEADERSHIP

MusicDecoded | PyTorch, Spring Boot, Python, Docker, Redis, PostgreSQL

May 2026 - Present

- Built a music analysis application that processes YouTube audio and generates synchronized beat, downbeat, chord progression, waveform, and music theory analysis
- Adapted Beat Transformer and CNN-LSTM models for beat, downbeat, and chord detection using spectrogram and chroma-based audio features
- Developed a Spring Boot backend with JWT authentication, PostgreSQL persistence, asynchronous analysis jobs, and Redis-backed job status tracking

ColorStack | Software Chair

January 2026 - Present

- Led 13 technical workshops on backend development, APIs, system design, LeetCode, and software engineering while mentoring 200+ students through technical and recruiting preparation

TECHNICAL SKILLS

Languages: Java, Python, C#, JavaScript, TypeScript, SQL, C++

Backend & Frameworks: Spring Boot, FastAPI, .NET, Node.js, React, Next.js, REST APIs, Microservices

Cloud & Databases: Azure, AWS, Google Cloud, PostgreSQL, MongoDB, Redis, Firebase, Azure Data Lake

Developer Tools: Git, Docker, Jenkins, CI/CD, JUnit, Cucumber, Postman, Playwright, Selenium

AI/ML: PyTorch, Deep Learning, Causal Inference, DoWhy, EconML, NumPy, Pandas
